

Procedure :

- Open Tableau & connect to product category dataset.
- Verify that category is assigned as dimension and sales as measure.
- Create individual visualizations.
- Add labels, title & improving sp understanding.
- Combine all visualization into dashboard & interact them.

Procedure :

- Open Tableau & connect to Website Traffic dataset
- Verify that date is recognized as a Date field & page Views & click through Rate are Measures.
- Create individual visualization such as line, bar chart
- Combine All worksheet into Dashboard for interactive Analysis.

Procedure :

- Open Tableau & connect geographic data dataset.
- Verify that city is dimension & population is measure.
- Create a Visualization Charts & bars using dataset.
- Combine All Worksheet into dashboard for interactive Analysis.

Procedure :

- Open Tableau & connect to survey results dataset.
- prepare the data by ensuring survey respondent in dimension.
- Create Bar & charts for visualization
- Combine All visualization into dashboard for interactive Analysis.

Procedure :

- Open Tableau & connect the monthly product sales dataset.
- Pivot the monthly sales columns into month field & sales field if required.
- Create chart & Table to visualize sales performance.
- Add labels, Titles & formatting to improve readability.
- Combine All Visualization into a dashboard for interactive exploration.

Procedure:

- create customer demographics dataset
- create bar chart to visualize the distribution of customer ages.
- create pie chart to represent the distribution of customers by gender.
- Build Table to display customer dataset.
- create dashboard by combine all.

Procedure :

- Create Employee performance dataset
- Create Line chart to visualize employee performance trends based on yrs of service
- Create bar chart to show distribution of employee across dept.
- Create dashboard by combine All.

Procedure :

- create product inventory dataset
- create bar chart to visualize the quantity.
- create stack bar chart to represent distribution across product.
- create dashboard combining All.

Procedure :

- Create survey response dataset
- Create grouped chart to visualize the distribution of response for Q1.
- Create stack bar chart to represent overall distribution of responses.
- Create dashboard combining all

Procedure :

- Create stock prices dataset in Excel.
- Create Line chart to visualize stock trend for stock A, B, C over time
- Create Bar chart to display the prices changes of stock A.
- Build Table of create dashboard by combining all.
